

Product release information

Product	AMS
Release Number	V4.3.0066
Release Date	1st October, 2012

Issue Date : 27th September, 2012
Author(s) : QA
Authorizer(s) : Product Manager
Issuer : QA

DOCUMENT HISTORY

Date	Revision	Change
21 nd May, 2012	0.1	Provisional Release
13 th June, 2012	0.2	Reviewed, updated & released in Provisional Status
6 th September, 2012	1.0	Updated and reviewed to reflect deployment to the Test Environment.
27 th September, 2012	1.1	Minor change to release date and reference to reflect deployment to the Production Environment.

Introduction

This document lists the enhancements and bugs relating to Kallik software products.

Disclaimer: Every care has been taken in the preparation of this document and other information that we publish to ensure that the information is accurate, factual and correct to the best of our knowledge, at the time of publishing. Kallik Limited accepts no liability for any loss or damage or unforeseen consequential loss or damage arising from the use of the information contained within these documents. The information published in these products is subject to change without notice at any time, and Kallik Limited accepts no liability or obligation to inform the reader of such changes.

1. Enhancements

Reference #	Description
RQ539	The project brief change audit has been enhanced. The system now provides a full history of changes for individual pieces of data. A summary of all user changes can be seen via a drill down from within the data tree.
RQ355	The audit log of user access and activity has been enhanced..
RQ725	A new management report has been added called “ Translation Status ” This report can be run from (i) within a live project, (ii) from a result in the Project Warehouse (asset Manager) and (iii) from a report hyperlink in the BI interface. The results displays the master phrases selected for the artwork component and all associated locale phrases including those that are missing
RQ721	A new concept that allows an artwork to be created from “master data” is being introduced. This concept allow users to create an artwork that is really only for reference, it can then be copied and locales changed to rapidly produce regional versions from the Master Artwork. To facilitate the data capture routing for master artworks the configuration of distributions have been improved (please refer to the relevant user manual for the type definitions).
RQ738	Architecture change- this requirement delivers improved system stability and reduces the technology footprint of AMS.
RQ773, RQ764	File delivery integration now associated to a 'print file' delivery mechanism for clients who require integration between AMS and print solutions. The new function allows a remote network folder to be defined and approved files to be automatically deposited into this folder
IN2179, <i>Client ref 4323</i>	RM - The “User Description” in the User profile now requires Administrator rights to edit
IN2246	RM - A change of password is now confirmed via an on screen system message
IN2284	DR - The dynamic routing user interface has been changed to reduce confusion, the access groups and task group are no longer visible
IN2342	ADM - The default setting relating to the “return to ADM” has now been changed to on.
IN2475	CM - When a new version of an artwork is already in progress, information of the project locking the artwork is now shown.
IN2489	AMS - New barcode type supported - (HIBC128 - Code 128).
IN2565	DAM - The Related Components attribute is now supported for Multipack/Gift Pack artworks.

IN2625	ADM/AL - The workflows related to “asset lifecycle” can now be selected from the ADM task and supports both conventional & automated processes.
IN2627	ADM/AAM -In previous release when starting approvals (conventional or automated) the ADM submitted a pre-defined set of data fields (from the brief) into attributes that were associated to the underlying asset. The pre-defined fields were configurable but they only mapped to a limited set of pre-determined attributes. In this release additional configuration options have been added so any field can be mapped to any attribute.

2. Bug Fixes

Reference #	Description
IN2137	ADM - the infrequent issue where certain data values caused the system to be unavailable has been resolved.
IN2275, <i>Client ref 5049</i>	BI - the issue where the My Projects report can no longer see the status of a project brief has been resolved.
IN2281, <i>Client ref 4956</i>	BI - Module timeout issue resolved.
IN2299	ADM - the issue where when exiting from the Artwork Data Request task caused "Artwork Manager System unavailable" message has been resolved
IN2309	AMS - Help button now directs users to the correct web page
IN2318	BM - screen layout improved to fix the display issue where the Send Email text was partly obscured in Project Notes.
IN2371	ADM - the access error has been fixed which allowed users without the “canGenerateArtwork” role the ability to access the Bulk Generate link.
IN2383	PM - The issue where the reason for changing a phrase was not being displayed has been resolved.
IN2396 <i>Client ref 5106</i>	BE - the search in the brief explorer where a Project Search on SKU and Component Code did not always return results has been resolved.
IN2399, <i>Client ref 5095</i>	The WERCS integration - the issue where the Phrase import sequence from The Wercs created an extra "No specific Region" phrase has been resolved
IN2412	BI - the report where Active Users and Regional Access returned results showing users with "No Specific Region" has been resolved
IN2414	DAM - the display issue where in the Project Warehouse (asset manager) Multiple Select All checkboxes were displayed when multiple search fields selected has been resolved
IN2426, <i>Client ref 5098</i>	ADM-Regional data was not being updated in the ADM if the data was: - entered in the project brief at project level - the locales of the component differ from the project such that the "master" locale for the language is different at component level to project level. This has been resolved
IN2430	BI - Full Approval Audit Report Library warning missing message has now been added as per

	original requirements
IN2434	PB - the issue where after copying a project the image sequence was incorrect has been resolved
IN2441	DAM - the AMS Asset ID, can now be included in a search
IN2442	RM - the upload banners that are used on the top frame of AMS pages has been improved
IN2448	BM - Resolved issue where the deletion of a failed Component resulted in a BM unavailable.
IN2452, IN2453	BM - Fixed issue where the free format text fields were not imported correctly to AMS.
IN2471, <i>Client ref 5118</i>	ADM - Issue resolved where the generation of artwork fails with deleted asset in BOM.
IN2486, <i>Client ref 5133</i>	PM - Resolved issue where duplicate phrase versions of the same locale added when OK double-clicked.
IN2650, <i>Client ref 5184</i>	AMS - Agile Service Integrator issue resolved (not picking up Change Orders under certain conditions).
