

Product release information

Product	AMS
Release number	V5.3.1150
Release date for evaluation	20 th February, 2017
Release date for live deployment	5 th March, 2017

Issue Date : 15th February, 2017
Re-Issue Date : 3rd March, 2017
Author(s) : Software Development Manager
Authorizer(s) : COO
Issuer : Software Development Manager

DOCUMENT HISTORY

Date	Revision	Change
14 th February, 2017	0.1	Internal review
15 th February, 2017	1.0	Customer release
2 nd March, 2017	1.1	IN6554, IN6681, IN6686, IN6679, IN6666

Introduction

This document lists the enhancements and bugs relating to Kallik software products.

Disclaimer: Every care has been taken in the preparation of this document and other information that we publish to ensure that the information is accurate, factual and correct to the best of our knowledge, at the time of publishing. Kallik Limited accepts no liability for any loss or damage or unforeseen consequential loss or damage arising from the use of the information contained within these documents. The information published in these products is subject to change without notice at any time, and Kallik Limited accepts no liability or obligation to inform the reader of such changes.

1. Enhancements

Reference #	Description
RQ2052	Artwork version (not necessarily the latest version) specified in the FormDef is used in factory Print
RQ1449	DAM Explore Tree view is now customisable by company where branches are derived from attribute values, e.g. Product Name SKU Codes
RQ1450	Default settings in the project wizard for New Version or Copy can now be controlled and configured via configuration
IN5895, nService 8040	New Assets report now includes a check box to include Version 1 of an asset
IN6679, nService 9648	Attributes in the Advanced Search Attributes picklist are now ordered alphabetically

Bug Fixes

Reference #	Description
IN6664, nService 9573	When running the Approved Artwork report, certain scenarios resulted in an Approved Date being retrieved without an associated timestamp, this resulted in timezones behind GMT potentially reporting the previous day against an approved artwork. This issue has been resolved.
IN6397, nService 9115	The ordering of DAM phrases within the master are now preserved even when duplicate information is entered.
IN6075, nService 8404/9072	When refreshing from master, all phrases from the master will be brought in in the same order. Free text in locales is now preserved when there is a mixture of free text and phrases.
IN6500, nService 9370	Tooltips in certain areas of the RM no longer remain on screen after the user has moved the cursor off the target area.
IN6663, nService 9656	An enhancement to prevent variable tags in the Factory Labelling solution being populated resulted in tags that were required in specific scenarios not being available. This issue has been rectified.
IN6396, nService 9068	The number displayed for search results in certain areas of the DAM, such as Where Used, were incorrectly including previous versions in the calculated number. This has been resolved.
IN6610, nService 9478	A potential issue with Service Integrator plugins not correctly handling and cascading error conditions correctly has been rectified.
IN6570, nService 9470	In Factory Labelling the GTIN Field only contained data available in any barcode tag prefix for all barcodes searched, e.g. GTIN1, GTIN2, BC_128, etc. The tags would be added to the field resulting in (01)(21), etc being displayed on the label.
IN6666, nService 9639	A specific label type occasionally doesn't display the serial number on the artwork (note: the printed label did contain the correct serial number). This issue has been resolved.
IN6686, nService 9675	Error when running Component Status Report has been fixed.
IN6681, nService 9646	Access to the translation reports has been restricted to users with the canViewTranslationStatus role.
IN6554, nService 9384	Under certain conditions when copying a component during the Project Brief wizard an error stating 'No sources have been selected' could arise. This issue has been resolved.

Appendix

Note: Additional changes are low risk and require no customer testing.
