

Product release information

Product	AMS
Release number	V5.3.12
Release date for evaluation	30th April, 2017
Release date for live deployment	21st May, 2017

Issue Date : 25th April, 2017
Re-Issue Date : 3rd March, 2017
Author(s) : Software Development Manager, Quality Manager
Authorizer(s) : COO
Issuer : Quality Manager

DOCUMENT HISTORY

Date	Revision	Change
21 st April, 2017	0.1	Internal review
25 th April, 2017	0.2	Improvements to descriptions
25 th April, 2017	1.0	Customer release
4 th May, 2017	1.1	Enhancements not noted in version 1.0 of implementation 5.3.12 release notes IN6818, IN6534, IN6801, IN6550. Release date for live deployment.

Introduction

This document lists the enhancements and bugs relating to Kallik software products.

Disclaimer: Every care has been taken in the preparation of this document and other information that we publish to ensure that the information is accurate, factual and correct to the best of our knowledge, at the time of publishing. Kallik Limited accepts no liability for any loss or damage or unforeseen consequential loss or damage arising from the use of the information contained within these documents. The information published in these products is subject to change without notice at any time, and Kallik Limited accepts no liability or obligation to inform the reader of such changes.

1. Enhancements

Reference #	Description
IN5125, nService 6648	Performance improvement to the inbox when multiple Brief Manager tasks are present
RQ2071	This functionality is in the codebase but is not yet available for use by customers. It includes the addition of a rules engine framework. This will be used to apply data and field transformation in the Project Brief and Project set up in a 2018 release.
RQ1453	To improve security the types of files that can be uploaded into AMS has now been restricted. The list of supported file types is available from support
RQ1452	Additional security added relating to editing of phrases in the phrase selector. Users can now only edit phrases if they have the canEditTextBM and canEditTextADM roles
RQ2083	To improve system security the user login details are no longer persisted in cookies.
IN6697	FL- In the function of factory labelling, -each customer has a new configuration option that controls the ability to allow or refuse the option to print additional labels relating to an ERP production order once the print job is closed.
IN5840, nService 7948	BM - The contributor list selector in the project Brief wizard is now ordered by First Name then Last Name.
IN6715	FL - In the function of factory labelling, a new “refresh button” has been provided on the review page to reset the date calculation start point used in the calculation of the expiry date. This function is available in in Production, Manual and Re-Label modes but not Re-Print mode
IN6771	FL - Performance improvements made to the Factory Print functionality.
IN6775	FL - Minimum of 3 labels (configurable) to be printed per order (1 initial validation label, 1 normal label, 1 final validation label). This is configurable per client.
IN6631, nService 9600	Improved resilience to connections between the AMS system and the Oracle database.
IN6818	FL - Enhanced wrap data facility in history to give clearer and more readable information.
IN6534	FL - Setting shelf-life period to "Day" displays set expiry date.
IN6801	FL - Improved display for Label Contents Details section.
IN6550	FL - Enhanced Custom Label dialogue functionality across multiple web browsers.

2. Bug Fixes

Reference #	Description
nService 9870	A change to the Global Country configuration to rename Ukranian to Ukrainian.
nService 9918	An update to the Global Country Code changed Chilean from CH to CHL.
IN6704, nService 9621	BM - The Finished Goods Part Number is now included in the HTML Brief.
IN6661	BI - The New Asset Version BI report now correctly populates New Version and Previous Version fields when right to left text is used, e.g. Arabic.
IN5766	WM - In the C4/C5 workflow allocation to Project Manager in a Studio displayed approval routes from the licensee rather than the studio. This has been rectified.
IN6027, nService 8414	BM - Data levelling has been improved for Composite Components to ensure that all data is correctly populated in the HTML Brief.
IN6717	FL - Labels without a Country Of Origin tag do not show the country in the Label Review screen for an Internal Reprint
IN6288	FL - The exit dialogue is no longer shown when re-printing from a completed order.
IN6040, nService 8446	BM - A more descriptive error message is now provided to users when attempting to upload an asset with the same name, type and sub-type in the Project Brief
IN5824, nService 7711	BM and ADM now handle hard returns so text is displayed correctly in the HTML Brief.
IN6730	FL - Data displayed in the Label Search Results Asset Card is now truncated and a tooltip displays the full data.
IN6618, nService 9591	SI - Increased resilience to SOAP errors in Service Integrator has been implemented.
IN6735	BI - A modification has been made to the Average Approval Cycles report to ensure that there is no longer a delay when processing Regions.
IN6732, nService 9790	FL - In Factory Labelling the data file available for ERP now contains expiration date as expected in all cases, including when the last label in a particular order does not include an expiry date field.
IN6383, nService 9087	DAM - A configuration modification was made to increase the robustness of the thumbnail generation for assets stored in the repository manager.
IN4217	BM - An intermittent issue with data levelling within the Project Brief duplicating data has been resolved.
IN6706	FL - A modification was made to ensure that the ECC200 barcodes generated in the preview are the same size as those generated by the printer.
IN6707	WM - When clicking the back button from the label review screen an error is no longer generated.
IN5759, nService 7778	PW - Archived assets are no longer included when creating variations based on masters in the Project Wizard.
IN6708	FL - Check digits at barcode verification stage are now included in the verification functionality.
IN6710	FL - When searching for a master label all artworks that match the component reference and revision number are now returned. Previously, if there were multiple matches only one result would be returned.
IN6728, nService 9737	ADM - Files generated in the ADM now have these invalid characters [/ \ ? : " * < >] stripped from the file name rather than being replaced with a '-'.

IN6630, nService 9965	FL - Performance improvements loading the factory Labelling Print History page.
IN6757	FL - Country Of Origin information is now displayed correctly on reprints.
IN5039, nService 5585	BM - In the Asset Matrix Selectors, the asterisk that indicates that a field is populated is now checked and removed if the field is not populated when clicking the 'Clear' button.
IN6776	FL - Batch Number and Part Number fields are no longer editable in 'Internal Relabel' mode.
IN6774	FL - Short Part Number is not mandatory in Manual or Internal Relabel mode.
IN6778	FL - Artwork label name is now shown in print search results.
IN6700, nService 9709	AA - Artwork Approvals now looks up and apply permission settings correctly
IN6680, nService 9678	RM - Improved thread security was introduced to prevent incorrect filenames from being assigned when exporting via (s)FTP.
IN6770	When exporting a number of large XML messages simultaneously low level error messages can be generated, synchronisation was introduced to avoid this message generation.
IN6772	FL - A date picker has been introduced for use when selecting a Manufacturing Date this will improve the validity of dates
IN6781	FL - When in manual mode and an invalid value is entered into the SLED field an error message is shown and the Save button is not enabled.
IN6780	FL - the error condition of a barcode being null at the barcode verification stage is now handled.
IN6768	BE - 'Select All Data' in the View Data Summary no longer results in JavaScript being displayed.
